

Fireplace inserts

2
3
I have always been fascinated by the warmth, comfort and security of a crackling wood fire. I am passionate about providing outstanding fireplaces with the very highest levels of technology and innovation.

And because the shimmering flames of a wood fire are at the heart of and unique fireplace architecture.

At Spartherm, for more than 30 years we have been driven by a burning ambition to combine the fascination of fire with modern living.

Please accept our warmest welcome

G. M. Rokossa.

Gerhard Manfred Rokossa
Founder and director.

THE ROMANCE OF A REAL WOOD FIRE.

4
5

My fireplace, designed just for me.

EXCELLENCE IS THE SUM OF ITS PARTS.

The choice of a new wood fire for your home rests on many factors; with our fireplace inserts we provide you with the perfect solution. Do you want a wood fire that compliments a modern, minimalistic interior? Or is your taste more traditional, preferring the cosiness and warmth of a rustic style of fire? Should the fireplace be inserted in a wall, or would it be better placed freestanding in the room? And what should the heat output be in order to heat your room to full effect?

We can offer you multiple solutions, either from our standard product range or tailored to your exact requirements.

No stone is left unturned to provide you with the perfect wood fire, we want you to have the best possible fireplace experience.

The most impressive things about our wood fire inserts are in the details. We use the very finest glass for our vertically sliding doors. And the combustion technology that we have developed is efficient, effective and sustainable.

This brochure represents just a small selection of our comprehensive range. Visit our website for the complete picture.

AN INSPIRING SELECTION OF FIREPLACE INSERTS.

6
7

Movie: **PremiumEdition**

Perfect fireplace solutions.

OUR PASSION is creating masterpieces with fire. That's why we are known as "The Fire Company".

That's why we refuse to compromise and we develop our fireplace inserts to the highest demands of quality and technical perfection.

Spartherm fireplace inserts have been known for their innovative and aesthetic solutions for many years. Our prime objective is to support every possible design idea and every creative aspiration. With our knowledge and experience, we ensure that our inserts are the very best of fireplace design and technology.

Reliable, durable and sustainable; our high-quality standards mean we make no concessions when striving for the best technical and design solutions. Spartherm fireplace inserts are unique, but don't just take our word for it, look for yourself.

"I love
strong and
expressive
shapes."

FLAT PANE

Clean lines, without any corners or edges.

Whether your preference is for a portrait or landscape, framed or frameless fire, we have a wide selection of models in a multiple choice of dimensions, giving you total control over the design. The clean styling of a front view fireplace insert impresses with its simplicity and elegance.

way to start
the day."*

TUNNEL

For room dividing walls and other impressive architectural features

The best tunnel wood fires are inspirational choices for home heating, design and construction. They are unique room dividing devices that provide warmth, comfort and visual appeal to two rooms simultaneously. And they are an energy efficient way of heating the home. When combined with special Spartherm features such as vertically sliding doors and the ability to heat the domestic water supply, they represent the ultimate in wood fire luxury.

Fireplace inserts that combine contemporary design with high technical standards.

Spartherm Linear fireplaces are created with intelligent design combined with the very latest innovations in fireplace technology, resulting in fires that are superior in every respect.

We use the finest and most stringently tested materials such as heat resistant glass and fire clay interior linings, whilst components such as door handles are made from high quality stainless steel.

Every detail is carefully thought through in order to achieve safety and simplicity of operation and provide years of comfort and pleasure.

In addition, we have developed smart and useful accessories. These include the S-Thermatik NEO combustion control for fully efficient combustion and our exclusive smartphone or tablet app, which enables effortless control over the fire from the comfort of your armchair.

58

59

Quality that you can rely on, all day and every day.

Attachments for the flue gas connection

Attachments for the flue gas connection
 Many options: Optional air or water-based heat exchanger, heat storage stones, flat flue gas connections, airbox for the reduction of particulate matter, draft control

Accessories for ideal combustion

 balanced flue operation)

Diversity of pane shapes

Intelligent and robust technology, designed in multiple parts so as to be accessible for pane cleaning. This is the case for all of our appliances.
 Highly heat-resistant glass ceramics

Choice of fireplace insert designs

Front, tunnel, 2 and 3-sided and circular view

Concealed opening/closing mechanism

Carefully concealed locking mechanism of the hinged side windows.

Air-wash system for windows

Pre-heated combustion air keeps windows clean

Door equipment

Distortion-free door profile, robust door seals and automatic contact pressure frame

Combustion air

In the combustion chamber ensures low-emissions and efficient combustion

Combustion chamber lining

Made from heat-resistant fire clay in ivory or anthracite colour finishes.

Cold touch handle

Skilfully designed in stainless steel

Hinged ash grate

Made from high quality casting materials

Actuating lever

For control of the combustion air. Cleverly designed and discreetly located for ease of use.

Fireplace inserts with external air connection (RLU)

We offer many fireplace inserts that have external air connections. This makes them compatible with domestic ventilation systems and passive houses. They are also suitable for distributing warm air to multiple rooms around the home.

All models have been inspected by the German Institute for Structural Engineering (DIBt). You can find a list of them with elevating or hinged doors from page 101.

The perfect solution for enjoying a beautiful fire in very small spaces.
These compact corner units have a low installation depth but all the advantages of the premium models.

PREMIUMEDITION

Stunning design meets smart technology.

Our **PREMIUMEDITION** does not just combine the complete range of features of our chimney inserts with exclusive design demands, Premium also offers a decisive plus in terms of additional equipment.

We use a paint system that produces a deep black surface that is scratch-free, providing a beautiful, long lasting finish. The polished glass windows have a particularly high level of transparency, making them reflection proof and resistant to soot pollution. The **PremiumEdition** glass doors are recessed into the fire assembly giving them a frameless profile with a seamless view of the flames, while the door handle is flush-mounted and barely visible. The surrounding cover is available in stainless steel, providing a clean and understated appearance.

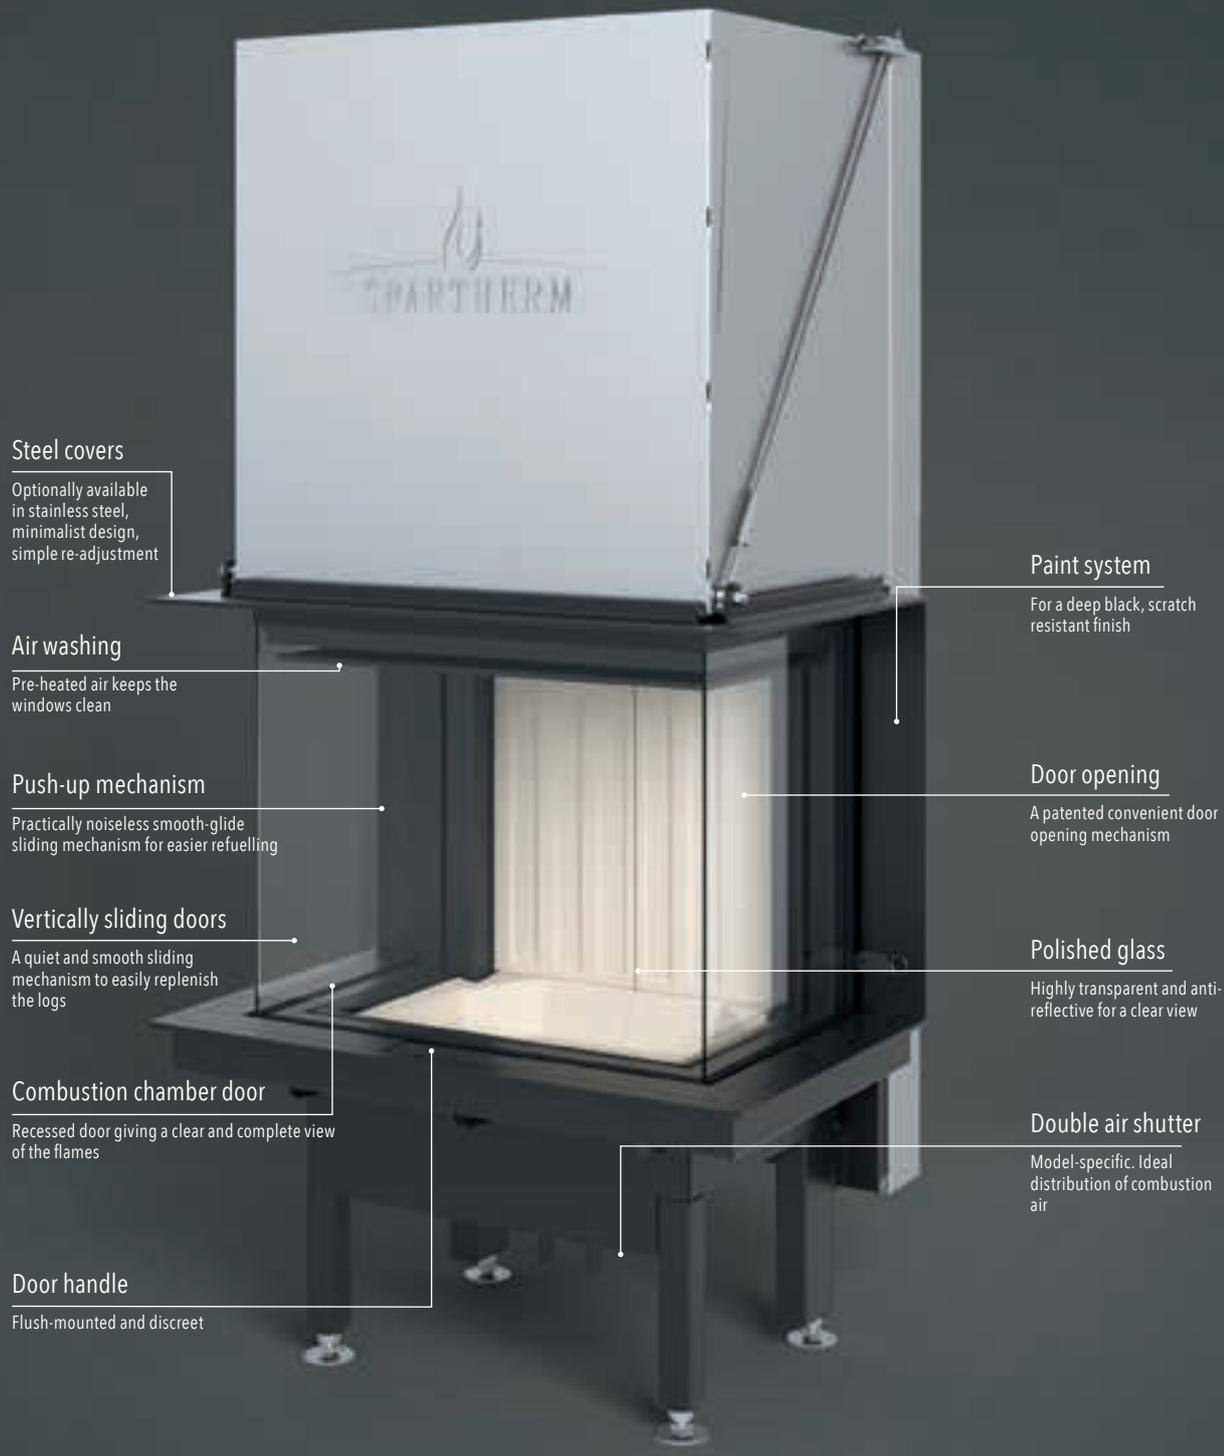

The technically advanced vertically sliding doors greatly simplify the replacement of logs, and the double air flap enables the correct distribution of combustion air.

72

73

It all adds up to the most sophisticated fireplace inserts available anywhere in Europe.

Receive more detailed information about Premium wood fires in our separate PremiumEdition brochure. This is available as both a download and an interactive brochure at www.spartherm.com.

CLASSIC TILED FIREPLACE INSERTS

Where ancient meets modern.

Whether you simply want to install a modern wood fire insert into a classic tiled stove or you want to give the stove a complete overhaul, our superior and efficient inserts are custom-designed for this purpose and come with a host of useful features.

We use austenitic, heat resistant stainless steel to ensure many years of use. Unlike ordinary steel, it combines corrosion resistance and heat-resistance without scaling.

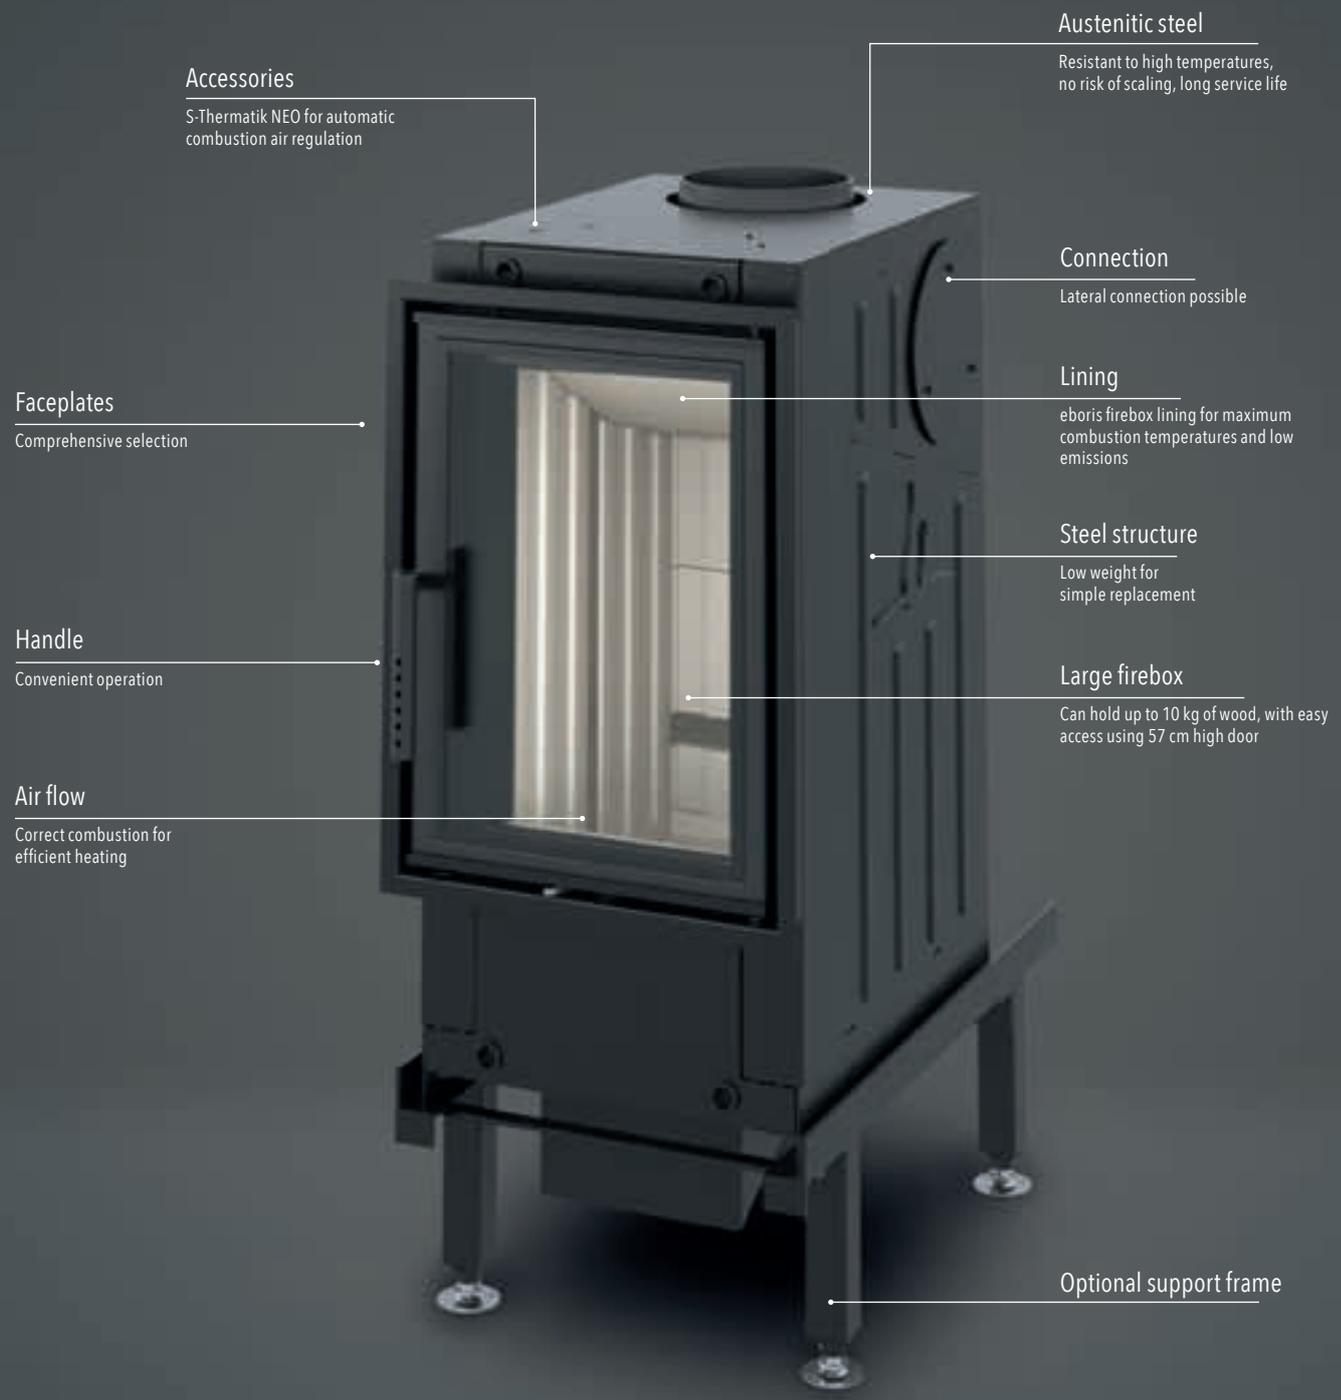

The Renova B model is compatible with up to 80% of older devices from other manufacturers and can take up to 10 kg of firewood, whilst the models Renova C-Air, Renova Cs-42 and Cs-50 have been designed for mixed combustion (wood logs or briquettes).

80

We provide a large selection of faceplates so your new insert can be adapted to match your old tiled stove. All tiled stove inserts include a large viewing window for a perfect view of the flames.

81

Make yourself comfortable. You can rely on our technology.

WATER HEATING FIREPLACE INSERTS

Spartherm H₂O models. The creative way to heat your domestic hot water.

Water-heating fireplace inserts

The energy that is generated by a Spartherm H₂O wood fire insert is put to good use by heating your domestic hot water at the same time as you are enjoying the warmth and comfort of your fire.

A special heat exchanger that is integrated into the fireplace insert heats the water from a buffer tank. The heated water then returns to the tank, from where it is circulated to radiators, underfloor heating systems, kitchen and bathrooms.

The water heating function can be used as either a replacement for an existing central heating system or to supplement the use of boilers and storage tanks in modern or traditional homes.

25–80 % proportion of water heating
78–86 % combustion efficiency
CO₂-neutral

Either way, it is an energy efficient use of the wood fire that reduces your home's carbon footprint and your domestic heating bills.

And because Spartherm H₂O models are specially adapted versions of our popular wood fires, with up to 86% energy efficiency, you keep all the unique design features that you have with a standard Spartherm insert wood fire.

Aquabox. The ingenious water heating solution for wood fire inserts

An Aquabox is an ingenious water heating solution that is compatible with standard Spartherm fireplace inserts. It comprises a specially designed water tank, combined with a heat exchanger that encloses the fire insert chamber, using the energy from the fire to heat the water that is held in the compartments of the tank. This heated water is then transferred by natural pressure to a buffer tank, from where it can circulate to central heating systems or domestic water heating systems around the home.

Aquaboxes are designed to supplement existing hot water systems or to channel hot water to specific parts of a home, such as a loft shower room or the underfloor heating in a conservatory.

There are two versions of Aquabox with different water capacities. They are available for a large selection of Spartherm wood fire inserts and have building inspectorate approval by the German Institute for Structural Engineering (DIBt) no: Z-43.31-198.

82

83

Varia 2R-55h H₂O

Smoldering fire window. Compact, 2-sided fireplace insert for all installation situations. Fire in its purest form.

Multiple use of heat

84

85

A cutaway model of a hydronic fireplace insert integrated into a heating system.

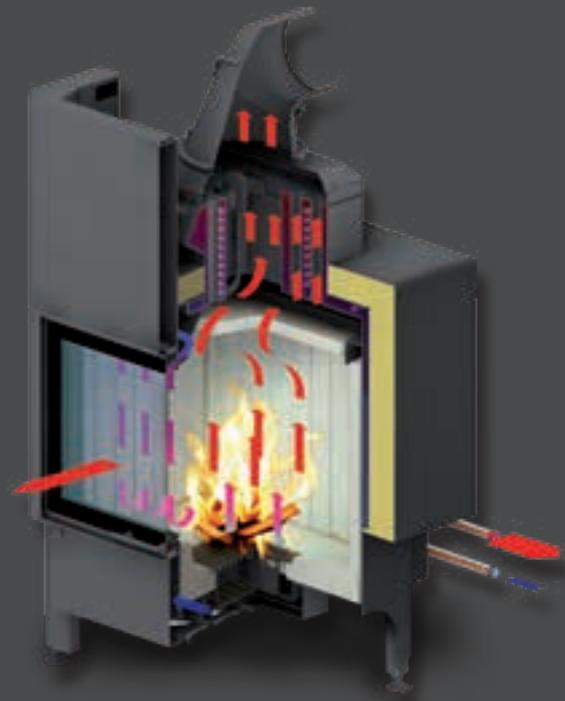

Layout and function of water-backed fireplaces

At first glance, a water-backed fireplace insert looks just like a conventional fireplace insert. This means you can adapt the design of your living space as you please with no limitations caused by differing layouts.

But a water-backed fireplace insert has a special feature: It is connected to the existing heating water circuit and has a water pocket or water jacket. When a fire is lit in the fireplace, it transfers part of the heating energy to the room where it is installed and the other part to a buffer store. A heat exchanger integrated in the fireplace insert heats cold water from the buffer store. The store absorbs the heat and stores it until it is needed in your home. This stored heat is highly efficient for supplying your kitchen, bathroom and shower with hot water. For this reason, the heating power of the fireplace insert is divided into heating and room-side. While the heating-side power transmits energy to the central heating system, the fireplace insert transmits the room-side power to the space where it is installed. If you choose a water-backed fireplace, you can save a great deal of money by operating it regularly, thereby reducing the cost of heating water with electrical power or gas. A water-backed fireplace is the perfect addition to your existing heater – a heating system that delivers a lot of heat and simultaneously provides a sustainable, ecological hot water source for your household needs.

Water-backed fireplace inserts for a cosy home

Water-backed fireplace inserts offer a variety of advantages and are a classic alternative for a fireplace that you can combine with your existing heater. They are powerful enough to make even large rooms warm and cosy by primarily using your fireplace. We offer a variety of designs for water-backed fireplace inserts. You can choose different layouts, fireplace insert sizes and performance levels. Because you are choosing high-quality products adhering to the strict regulations of the German emission protection regulations, your heating system is reliable and adheres to all necessary safety requirements. We have the right water-backed fireplace insert for any taste and any installation situation, so you can heat your living space conveniently and effectively.

Sectional model: Integration of a water-backed fireplace insert

Generating cosy warmth with water-backed fireplace inserts

With the support of a water-backed fireplace insert, your heating system will impress you with its highly efficient heating power. Heat up your room to cosy temperatures based on your requirements, the size of the fireplace and the size of the room. Choosing the water-backed fireplace means choosing a model that can supplement and sometimes even replace your actual heater. All models in the water-backed fireplace insert category are extremely user-friendly, sturdy and sustainable. Various sizes and designs are available, allowing you to find the perfect fireplace insert for your heating system and rely on its innovative heating technology. The inserts are suitable for classic and modern, nostalgic and minimalist fireplaces whose heating power is adapted to operation with water pockets. Let yourself be inspired by the wide range of high-quality, powerful water-backed fireplace inserts we offer.

Generation of heat through burning wood is a CO₂-neutral alternative to oil- or gas-fired heating systems. So what would make more sense than to use ultra-modern technology to make the most sustainable use possible of the residual heat in the exhaust gas?

TECHNOLOGY

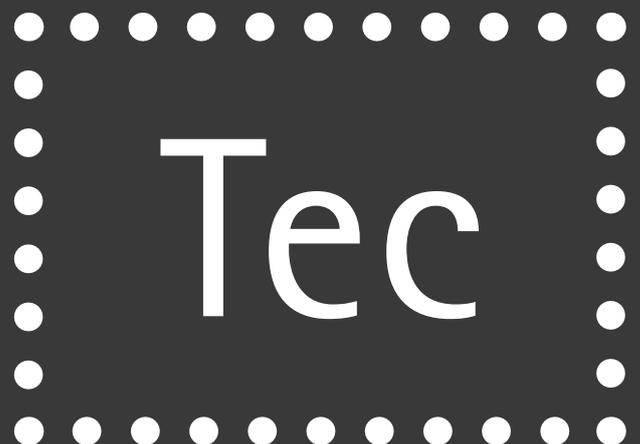

Made by Spartherm. Quality that amazes.

Top materials, high-quality workmanship, great function and a long product life – that is the kind of quality we represent and you can rely on. State-of-the-art technology, great efficiency and optimised energy usage – various innovations allow us to meet all demands made of modern fireplace inserts.

Home

Innovative heat retaining devices to enhance the performance of your fireplace insert.

When it comes to generating heat as efficiently as possible, you have the best options with our solutions. You can easily expand your fireplace with our innovative heat accumulators. Our Thermobox, Helix and Magnetherm as well as eboris-akku storage stones offer a high flexibility in use with maximum benefit.

The great advantage: Heat recovery. Many appliances are suitable for ceramic flues and steel heat recovery units.

This is how it works: highly compacted, fire heat storage material is installed in your fireplace as a heat storage medium. This stores the heat while the fire is burning and slowly releases it again to the room via the fireplace after the fire has gone out. That way, you can perceptibly reduce your energy costs as well as protect the environment. Ask your specialist dealer/stove fitter.

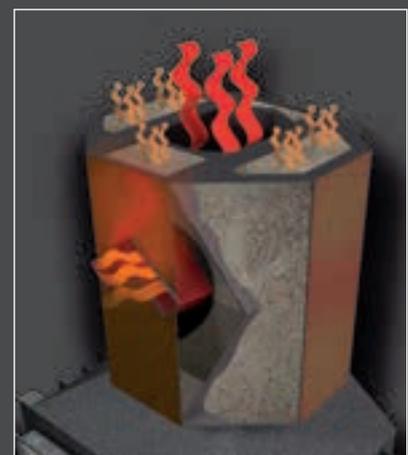

Thermoboxes

The efficient way to maximise the energy of your fireplace insert

Thermoboxes are heat retention devices that are filled with special granules. They are available for many different fireplace inserts in two sizes. They absorb heat from the rising hot flue gases and gradually release that heat into the atmosphere. Because of their compact size they take up little space, are easy to install and offer an affordable solution to maximise the potential of your fireplace insert or stove.

88

89

Helix

The clever heat retaining coil

Helix (Greek for coil or spiral) comprises a heat retaining coil that is wrapped around the flue pipe at the back of the fire. As the hot gases pass through the flue, they heat the Helix at the same time. Because the coil is made from a heat retaining material, it releases that heat over time. There are 2 Helix models, the 400 and 460 in S, M, L and XL sizes.

Magnetherm

Simple and effective heat retaining stones

Magnetherm stones are available in modular tongue and groove units that provide additional insulation for the combustion chamber whilst retaining supplementary heat at the same time. The more thermal storage mass surrounding the fire insert, the more heat is retained. The energy released by the stones can be used to power warm air ducting, combined storage/hot air systems, hypocaust underfloor heating and enclosed heating systems. Magnetherm, which is like soapstone, has a high density of 2.8 kg/dm^3 and ensures excellent heat retention and distribution.

eboris-akku

Easy and convenient heat storage batteries

eboris batteries are heat retention elements that can be easily suspended from the side and rear cooling fins of wood fire inserts. Once fitted, they act as effective heat storage devices that provide sustained radiant heat into the living room for up to 10 hours after the fire has died down.

eboris batteries are available in two different widths and are a low cost, low maintenance heat retention solution.

ACCESSORIES

Practical and intelligent solutions for your fireplace insert.

Our accessories have been ideally adapted to the Spartherm combustion technology and provide you with additional benefits using the corresponding system extensions.

These include electronic regulating modules that significantly increase efficiency and allow sustainable and economic combustion.

Additional safety when operating and using your stove is provided by the negative pressure switching interface. The fully automatic function provides effective protection during the simultaneous operation of ventilation systems and fireplaces. Continuous monitoring ensures that, when pressure conditions are not favourable between the chimney and installation space, that the automatic room ventilation is disabled.

Our draught control systems provide a high level of operating comfort and reduce the formation of soot and emissions.

The smart solution: S-Thermatik NEO

We have developed a convenient solution to ensure improved fuel usage: the S-Thermatik NEO. Thanks to the use of an interactive control system via display, smartphone or tablet, you reduce the amount of fuel required and thus cut your costs.

The S-Thermatik NEO ensures that the three important factors: fuel, temperature and air supply are always ideally adjusted to each other during heating. The app continuously supplies clearly laid out information on output, operating status, room temperature and stove temperature.

90

91

This is what our combustion control can offer:

- App menu available in nine languages: German, English, Dutch, French, Italian, Spanish, Czech, Polish and Swedish
- Display of combustion status on main screen of the app and on the control display
- Visual and acoustic signal for adding more fuel
- Automatic positioning of the air control lever in the event of a power cut heating can be continued manually
- Can be coupled to automatic window pane lift (SESAM 2)
- Bluetooth connection to mobile devices; free app (Android and IOS) to operate the S-Thermatik NEO via smartphone or tablet

S-USI II Negative pressure switching interface

The fully automatic function ensures maximum safety during the parallel operation of ventilation systems and fireplaces and has been technically certified and approved by the German Institute for Structural Engineering (DIBt). The ambient conditions are thus monitored independently. In the event of a fault, the ventilation systems will be automatically switched off.

Draught controls Complete Control

The S-Kamatik, S-Kamatik Plus and S-Kamatik PRO 2 are available. These draft controls provide a high level of user comfort and optimum burn-up. The formation of soot and emissions is reduced.

S-ESAM 3.0 (from 11/2020) Electric sliding door with actuator mechanism

Automatic pane lift, remote controls (open - stop - closed).

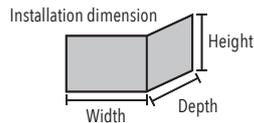

Significant features:

- The battery control system with automatic charging, which used to prevent an immediate start when the battery was empty, is no longer used. The new control system has no battery but is permanently connected to the mains.
- Door operation during power failure: While the battery used to make it possible to operate the door electrically during a power failure, a capacitor control system now ensures a controlled closing process if the door is open and a power failure occurs. As of that point, the door can be operated manually at any time.
- Calibration runs: The S-ESAM 3.0 is a fully self-parametrising system. Once it is connected, it is necessary to trigger a calibration run one time. All parameters are then calibrated automatically, so that the control system can be used for any door height without complicated adjustments.
- Improved movement behaviour
- Simplified menu navigation with reduced number of menus
- Delayed lifting for pressure equalisation: Prevention of smoke escaping

Since the beginning of 2019, we have been working closely with the company ofenfindAR. The aim of this collaboration is to give you the ability to visualise a fireplace installation in your own living room.

Everybody knows the problem You simply can't imagine the dimensions of a stove in your own home? The height, the width, the overall size? What it will look like with filler applied? Or with plaster? And what if the plaster is red? How about in the afternoon sun? ovenfindAR offers the solution within seconds!

Or is your new home still being planned? That's no problem for the ofenfindAR "scaling function", which lets you position your dream stove to scale on any building plan and then edit, modify, replace or view it as usual.

A multitude of pre-integrated fireplace installations will allow you to visually integrate a finished stove in your living space. This will make your decision easier and will help you adapt your specific plans even more successfully to your own ideas and desires.

ofenfindAR can be downloaded free of charge from the App Store or Google Play Store. The app is currently compatible with iOS 11.3 and higher or with Android 7.0 or higher.
